No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 26870, Application US/10425114

Publication No. US20040034888A1

GENERAL INFORMATION:

APPLICANT: Liu, Jingdong

APPLICANT: Zhou, Yihua

APPLICANT: Screen, Steven E

APPLICANT: Tabaska, Jack E

APPLICANT: Cao, Yongwei

TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement

FILE REFERENCE: 38-21(53313)B

CURRENT APPLICATION NUMBER: US/10/425,114

CURRENT APPLICATION NUMBER: US/10/425,114

CURRENT FILING DATE: 2003-04-28

NUMBER OF SEQ ID NOS: 73128

SEQ ID NO 26870

LENGTH: 3837

TYPE: DNA

ORGANISM: Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enzymes. The present invention describes soreening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory activities. This polynucleotide sequence is a human kinase DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3765
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecule encoding a kinase polypeptide, useful for preparing a composition for treating diseases or disorders, e.g., c or neurological, immunological or inflammatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Match:

                                                                                         밁
                                                                                                                                                                                                                                                                                        Alignment Scores: Pred. No.:
                                                                                                                                                               US-10-618-941-99 (1-507) x ADL13324 (1-4048)
                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a combination comprising cDNAs that are Cd differentially expressed in response to steroid treatment. Also included Cd are the following: a high throughput method for using a cDNA to detect Cd differential expression of nucleic acids in a sample; and a high Cd throughput method of screening molecules or compounds to identify a Cd ligand that specifically binds a cDNA. The sample is from a subject with Cd wilson disease and comparison of a standard defines a stage of that Cd disease. The high throughput method of screening molecules or compounds to identify a ligand that specifically binds a cDNA comprises: combination to the molecules or compounds under combination with molecules or compounds under conditions to allow specific binding; and detecting specific binding between each cDNA and at Cd least one molecule or compound. The molecules or compounds are regulatory corrections. The combination is useful for preparing a composition for treating liver disorders associated with steroid therapy, e.g., cirrhosis Cd inferentially expressed in steroid-induced C3A liver cells. Note: The sequence represents a human cDNA which is differentially expressed in steroid-induced C3A liver cells. Note: The specification but was obtained in electronic format directly from USPTO or reaching the printed on the part of the printed content of the printe
                                                                                                                                                                                                                                                   Percent Similarity:
                                                                                                                                                                                                                                 Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 1053; 141pp; English.

 The invention describes a polynucleotide consisting
                                                          New recombinant DNA construct, useful for improving plant tolerance cold, heat, drought, herbicides, extreme osmotic conditions, pathoge pests, for conferring increased resistance to plant disease, or for improving yield.
                                     Claim 1;
                                                                                                                                             Liu J,
                                                                                                                                                                                          (ZHOU/)

CC available in electronic form from the US patent office at CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide CC of the invention are also useful in physical arrays of molecules and as CC plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme CC osmotic conditions, pathogens or pests, for manipulating growth rate in CC plant cells by modification of the cell cycle pathway, for conferring CC increased resistance to plant disease, for producing galactomannan, CC lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake CC or by providing improved plant growth and development under at least one Stress condition or for modifying seed oil or protein yield and/or CC content. This sequence represents a plant full length insert
